2026 GUIDE

AI RECRUITMENT

Voice AI vs. Video Interviews: The truth most hiring teams are missing.

One captures how people actually think. The other just measures how well they rehearse.

Swipe to learn more

One converses.
One just records.

Video Interview
ONE-WAY RECORDING

Candidate reads a question, records a rehearsed answer, submits. No dialogue. No follow-up. No way to probe vague responses.

Measures preparation, not performance

Voice AI Interview
REAL-TIME CONVERSATION

The AI listens, identifies gaps, asks dynamic follow-ups. Throws curveballs candidates can't rehearse. Adapts in real time to every answer.

Captures how people actually think

70% of screening interviews are conducted with unqualified candidates. Video hasn't solved this.

🎭 **Candidates game the format.** Pre-recorded video lets them rehearse, re-record, and polish. You're measuring interview prep — not job fit.

📹 **Recruiters still watch every video.** 200 applicants = 200 individual reviews. A different bottleneck, not a solution.

😰 **Camera anxiety creates bias.** Excellent candidates who are uncomfortable on camera get screened out before the real conversation starts.

4 reasons voice AI produces better signal

🧠

Tests real-time thinking

Dynamic curveballs candidates can't rehearse — because follow-ups depend entirely on what they just said.

📱

Zero friction to complete

No camera, no lighting, no quiet room needed. Candidates complete from their phone, on a commute. Higher completion = bigger shortlist.

🌏

Built for APAC, not bolted on

Calibrated for non-native English speakers across Sri Lanka, Malaysia, Vietnam, India, Indonesia. Western platforms score them unfairly.

🔍

Non-tech recruiters vet tech roles

AI asks the probing questions on the recruiter's behalf. They get a scored shortlist — not a stack of videos to decipher.

JOB TRYOUTS

What if candidates could show you they can do the job?

Job Tryouts place candidates inside realistic, role-specific scenarios — a difficult customer, a complex objection, a high-pressure support call — powered by AI Persona Technology. No interview format comes close.

0.55–0.63
Predictive validity (vs. 0.14 for unstructured interviews)

30–45%
Reduction in employee turnover for companies using Job Tryouts

87%
of candidates rate the experience "good" or "excellent"

3.2–4.7×
ROI within the first year

Not projections. Live outcomes.

INSURANCE GROUP — SRI LANKA

150 candidates screened in 5 days — previously a 4–5 week manual process

A fundamentally different operating model for talent acquisition.

TECH AGENCY — SRI LANKA

488 resumes → 15 shortlisted in one week. 80% reduction in screening time.

"Like having 10 recruiters working around the clock." — Hiring Manager

MAJOR FINANCIAL INSTITUTION — SRI LANKA

Secured Board IT approval for enterprise-wide rollout after pilot

Voice AI screening meets rigorous financial sector compliance requirements.

4.2 / 5 Average candidate satisfaction rating — collected automatically after every Talvin interview.

THE BOTTOM LINE

Choose voice AI if you're serious about signal over polish.

- Hiring 25+ candidates per quarter
- Operating across APAC or offshore markets
- Non-technical recruiters vetting specialist roles
- Losing top talent to faster-moving competitors
