OFFSHORE STAFFING & RPO

Screening is your margin line.
Not your HR line.

01 — THE COGS PROBLEM

Every bad placement is revenue *you already spent.*

A hire who fails in the first 90 days doesn't show up as a line item. It's sunk recruiter hours, a free replacement search, and a quieter next contract.

02 — WHERE IT BREAKS

A confident wrong answer *looks identical to a right one.*

A recruiter in Colombo or Manila can judge communication and culture fit. Not a senior engineer's technical answer — and the gap stays invisible until the client finds it.

03 — WHAT FIXES IT

The interview has to do the technical vetting. *Not your recruiter.*

That means the AI interviewer itself needs to ask real follow-up questions and probe deep on the skills that actually matter to the client.

04 — ADAPTIVE VOICE SCREENING

Meet Sally.

PROBE DEPTH — SET PER QUESTION

Culture fit & communication	LOW
Role process & ownership	MEDIUM
Critical technical skill	HIGH

Adaptive follow-ups & curveballs, APAC-paced

05 — THE OUTCOME

488 → 15

A product engineering team used Talvin to screen 488 resumes down to a final shortlist of 15 — in one week, with no added recruiter headcount.
