Talvin

PRODUCT · ATS INTEGRATIONS

No rip. No replace.

Talvin AI sits on top of the ATS your recruiters already open every morning.

Talvin

THE USUAL CATCH

Most AI tools want a new system

Adopting AI screening usually means a new login, a migration project, and retraining a team that already knows how to do the job. That's the real cost of switching — not the subscription fee.

Talvin

HOW IT CONNECTS

Four steps. Zero overhaul.

1 **Connect your ATS.** Ashby, Workday or Zapier — live today, no workflow change.

2 **Candidates get interviewed automatically** the moment they apply, in their own time.

3 **Sally probes each answer.** Depth set low, medium or high, per question.

4 **A scored, ranked shortlist lands back in your ATS.** No new tab to check.

Talvin

FITS THE STACK YOU RUN

Works with what's already there

Ashby and Workday are live in production. Talvin also connects into Zapier for everything else in your hiring workflow — no separate tool to stand up.

Talvin

WHAT THIS UNLOCKS

Screen volume, not seats

Recruiters lose 6.5–9 hours of admin per placement today, most of it reconciling notes across tools. Automatic shortlisting removes that step entirely — recruiters open one system and see who's ready.

0	6.5–9h	1
new logins to manage	admin saved per hire	system recruiters open

Talvin

BUILT FOR YOUR STACK

Your workflow stays yours

Talvin AI fetches candidates from your ATS, triggers the interview, sends invites and reminders, and returns the shortlist — all inside the tools your team already uses every day.
