

Voice AI is the **floor** now.

Here's what actually separates hiring platforms
once every vendor can talk.

WHAT CHANGED THIS QUARTER

Everyone shipped voice.

HireVue launched real two-way conversational voice.
Ribbon AI repositioned as an "AI hiring operator." HeyMilo
raised funding aimed straight at APAC offshore hiring.

Voice stopped being the pitch. It's the baseline every
platform now has to clear.

— THE COMPARISON THAT MATTERS NOW

Not voice. Depth.

The real question isn't whether a platform can hold a conversation. It's whether it adapts inside one — configurable drill-down depth, and deliberate curveballs that test whether an answer holds up under a follow-up.

— THE FEATURE NOBODY ELSE HAS

0 of 5

Of the five voice AI platforms in this comparison — HireVue, Ribbon, HeyMilo, Interviewer.AI, Vervoe — **zero** run a job simulation that scores how a candidate actually performs.

WHY THAT GAP MATTERS

Talking well isn't **doing** well.

Job Tryouts places a candidate inside a realistic scenario and scores how they actually perform — not how they describe handling it. It's the feature that won the VAPI Global Voice AI Hackathon, top 10 worldwide.

PRICING, SIDE BY SIDE

\$175/mo

Talvin's published starting price. Ribbon starts at \$499/mo. HireVue and HeyMilo don't publish pricing at all — both are sales-gated enterprise deals.

YOUR MOVE

Ask every vendor **one** question

What does this platform measure once the interview is over — the transcript, or the candidate's actual performance?

Book a demo — see what Sally measures beyond the transcript
