

A fast reply isn't a shortlist.

WhatsApp solved APAC hiring's easiest problem.
Here's the one it left untouched.

THE REAL CHANNEL

One channel candidates actually open.

- 01** Candidates in Sri Lanka, India, Malaysia, Indonesia and Vietnam check WhatsApp before email.
- 02** LinkedIn InMail sits under 2% reply rate for frontline and BPO roles.
- 03** The same message on WhatsApp gets answered in minutes, not days.
- 04** None of that tells you who's actually worth a call.

THREE WAYS TEAMS DO THIS

Not all sourcing is equal.

- 01** Broadcast a message to a saved list — fast, but one-way and unmanageable past a few hundred replies.
- 02** Template outreach through the WhatsApp Business API — better reach, still needs a human to read every reply.
- 03** A two-way AI conversation that qualifies the candidate before a recruiter sees them.
- 04** Only the third one produces a shortlist instead of an inbox.

 THE GAP

200 replies.

That's what one contact-centre WhatsApp push can generate in a week. Somebody still has to read every one, decide who's worth a call, and reach the good ones **before a competitor does.**

WHAT A REPLY CAN'T SHOW

"Yes, I'm interested" isn't a **signal**.

It doesn't show you why they left their last role, what they actually want next, or whether they can do the job. **That takes a real conversation** — structured, not scrolled through.

HOW IT WORKS

Every reply gets a **real** interview.

- 01** Adaptive two-way voice interviews, running 24/7, at whatever volume the week throws at you.
- 02** Follow-up depth set per question: low, medium or high.
- 03** A measured pace and neutral accent built for APAC, not adapted from it.
- 04** Structured shortlists returned straight into Ashby, Greenhouse or Workday.

YOUR MOVE

Replies aren't the bottleneck.

If you're hiring 25+ people a quarter across APAC, the gap is between a reply and a real conversation — not between channels.

Book a demo — run one of your open roles through Sally
