

Your screener runs **24/7** now.

How voice AI is replacing manual phone screens for high-volume APAC hiring teams — and what it means for your pipeline.

WHAT IT IS

Not a video screen. A **live** conversation.

Voice AI conducts a real two-way dialogue — it listens, probes, and adapts.

One-way video platforms ask fixed questions to a camera. Voice AI follows up. If an answer is vague, it drills deeper. Every interview is different because every candidate says something different.

5

**days to screen 150 candidates.
It used to take 4–5 weeks.**

A diversified Sri Lankan conglomerate ran high-volume screening through Talvin. Top candidates got their interview the same day they applied — before a competitor made an offer.

THE INSIGHT PROBLEM

70%+

**of first-round interviews are
with unqualified candidates.**

Keyword matching against a CV cannot tell you how someone handles pressure, reasons through a new problem, or communicates under scrutiny. Voice AI replaces keyword matching with an actual conversation — and produces a transcript-grounded evaluation recruiters can audit.

Four steps. **Zero** manual screens.

01 **Configure the job**

Set competencies, drill-down depth (Low / Medium / High), and connect your ATS.

02 **Candidates get a link**

Automated invite, reminders, and follow-ups — no coordinator needed.

03 **AI conducts the interview**

Adaptive, real-time conversation. 24/7. Any device. Any time zone.

04 **Shortlist delivered to ATS**

Ranked candidates with transcript-grounded evaluations — ready to review.

CANDIDATE EXPERIENCE

4.2

out of 5 average candidate
satisfaction score

94%

of candidates couldn't tell the
AI from a human recruiter

A two-way voice conversation feels like a real interview. One-way video doesn't. For APAC candidates uncomfortable recording to a camera alone, this difference in **completion rate** is significant.

— READY TO TRY IT?

Screen faster. Hire **smarter.**
