

# Sally asks the **next** question.

An AI screening interview that changes direction based on what the candidate just said.

---

THE PROBLEM

# A fixed script **can't follow up.**

Most screening runs the same questions in the same order. A vague answer gets no probe, so it passes. **A strong answer never gets tested at all.**

---

## HOW IT WORKS

# Listen. Probe. Decide.

- 1 Sally hears the answer.** Her next move depends on what was actually said, not on a script.
- 2 She chooses the move.** Probe deeper, move on, or throw a curveball.
- 3 Depth is set per question.** Low, Medium or High, so the critical skills get the most time.

— MEET SALLY

# One interviewer, **every** candidate.

Paced for APAC English, with neutral accents and a calm rhythm. Candidates talk to her, not to a recording.

---

 OUTCOMES

# 460 applications. Top 2%.

A management trainee programme ran 460+ applications through adaptive interviews. **96 candidates completed one, and the shortlist came down to 10.**

**96**

— FITS YOUR STACK

# Sits on **your** ATS.

Candidates come in from your existing system. Interviews trigger automatically, and shortlists go back to the same place.

— BOOK A DEMO

# Watch Sally follow up.

Book a demo and see an adaptive interview run live.
