IDENTITY RISK IN REMOTE HIRING

Your next hire might not be who you interviewed. *Detection won't catch it in time.*

01 — THE NEW RISK

Proxy candidates and deepfakes *are mainstream now.*

A paid stand-in sitting the interview. A deepfaked voice feeding answers. Common enough in 2026 that several AI interview vendors shipped detection features just to keep up.

02 — WHY APAC FEELS IT MOST

No office visit. *No physical checkpoint.*

Offshore delivery centers and BPO hiring run fully remote, high volume, across time zones. That's exactly where impersonation is easiest to attempt and hardest to catch on a scheduled video call.

03 — WHAT FIXES IT

Detection catches it after. *Prevention stops it before.*

The fix isn't a fraud scanner bolted onto a static interview. It's building the interview itself so there's nothing scripted left to fake.

04 — JOB TRYOUTS

A live scenario. *Not a rehearsed answer.*

JOB TRYOUT — ROLE SIMULATION

Scenario	Irate customer, billing dispute
Format	Live, responsive AI persona
What's measured	Actual performance, not a script
Outsourceable to a stand-in	NO

Job Tryouts: performance over promises

05 — THE OUTCOME

30–45%

lower turnover

Companies using Job Tryouts see a 30–45% reduction in turnover — a strong signal that the people they hired were actually who they appeared to be.
