

70% of APAC screening interviews are wasted

Why high-volume hiring teams across Asia-Pacific are switching to adaptive voice AI

THE PROBLEM

Most voice AI is built for the **West**

US accents. US compliance. US enterprise pricing. Not APAC.

Candidates in the Philippines, Indonesia, Sri Lanka, and Vietnam experience real friction with Western-built AI tools. Transcription drops. Confidence suffers. Your assessment data gets skewed — before the first interview ends.

— THE STAT

70%

of APAC screening interviews are conducted with unqualified candidates

The fastest way to change that ratio: AI your candidates can actually understand and engage with comfortably.

THE DIFFERENCE

Scripted $\neq$ Smart

Real AI adapts to what candidates actually say

Claims SQL expertise? Sally probes it. Mentions a specific project? She asks about a decision they made. Recruiters set drill-down depth per question: Low, Medium, or High — so you go deep on skills that matter.

Interview how they **interview** — or how they actually work?

45% reduction in employee
turnover

AI scenario simulations place candidates inside realistic workplace situations. Graded in real time. No other voice AI platform offers this.

 VAPI Global Voice AI Hackathon Winner

REAL RESULTS

What APAC teams are actually achieving

460+ → 10

Applications screened to final shortlist — one hiring cycle

Management trainee programme, South-East Asia

80% faster

Screening time cut — 488 resumes, 15 shortlisted in one week

Tech services firm, Sri Lanka

— GET STARTED

Screen **smarter** across APAC

Adaptive voice AI built for non-native English speakers. Job Tryouts. ATS-native. Starts at \$175/month.
