

One desk. Five markets. The math doesn't **hold**.

Why a lean Singapore TA team hiring across the region keeps losing candidates it should be closing.

THE STRUCTURAL PROBLEM

It's not more hiring. It's **different** hiring.

- 01** One req pulls candidates from Singapore, the Philippines, and Malaysia at once — each pool with different fluency, pay expectations, and availability.
- 02** Volume arrives in spikes, not a drip — 200 roles for a new contact center, not a steady trickle.
- 03** You're verifying who's actually on the call for a delivery center your team may never visit in person.

WHAT'S ACTUALLY BREAKING

Four things stall a lean team **every** time.

- 01** Resumes don't test the job — over 70% of screening interviews industry-wide end up run on candidates who turn out unqualified.
- 02** A generalist recruiter in Singapore is asked to judge a backend engineer in Vietnam.
- 03** Top candidates are gone within days of a slow, multi-week process.
- 04** Tools built for US/UK English keep misfiring on APAC accents.

HOW IT ACTUALLY WORKS

One agent. Every market. **Same** bar.

- 01** Sally runs adaptive voice interviews calibrated for APAC accents — Singapore, KL, Jakarta, Ho Chi Minh City, same questions and criteria.
- 02** Configurable drill-down (Low / Medium / High) lets a non-technical recruiter go deep on the one skill that actually matters.
- 03** Optional video adds a legitimacy signal without slowing the interview down.
- 04** Runs 24/7 across time zones — a candidate in Jakarta screens on their own clock.

WHAT IT ACTUALLY COSTS

18 minutes.

An 8-minute technical screen plus a 10-minute culture-fit interview is billed as 18 minutes, total — not per interview, per minute actually used. That's what makes screening every market from one HQ affordable at volume, not just possible.

WHAT IT LOOKS LIKE IN PRACTICE

4.2 out of 5.

That's the average candidate satisfaction score across every completed Talvin interview — collected after each one. Screening at volume usually costs you employer brand. It doesn't have to.

- 01** A Sri Lankan conglomerate screened 150 candidates in 5 days. The manual version took 4-5 weeks.
- 02** A management trainee programme went from 460+ applications to a shortlist of 10.
- 03** A major financial institution cleared Board IT approval for an enterprise-wide rollout.

WHERE TO START

Fix the filter before you **add** the headcount.

If your team is hiring 25+ people a quarter across APAC from one HQ, the screening layer breaks long before the recruiters do. That's the part worth changing first.

- 01** Read the full Singapore HQ hiring guide — link in comments.
- 02** Book a demo and watch it run on one of your actual open roles.
