

India's hiring math is **broken.**

The offshore recruitment guide for scaling
teams in 2026

THE VOLUME PROBLEM

400+

applications in 48 hours from one Naukri post

India's talent market gives you volume. Your process has to handle it — or your best candidates are gone before you call them.

THE HIDDEN COST

70%

of screening interviews are with candidates who won't get the job

Most recruiter hours at the screening stage are spent ruling people out. At India's application volumes, that's 500+ recruiter hours per 50 hires.

THE FIX

AI voice screens **every** candidate first

- Runs 24/7 — hundreds of simultaneous sessions, no recruiter needed
- Assesses communication clarity, reasoning, and role-specific competencies
- Built for APAC accents — not degraded accuracy from Western-trained models
- Delivers a ranked shortlist directly into your ATS

— REAL RESULT

4–5 weeks compressed to 5 days

APAC CONGLOMERATE — INSURANCE & DIVERSIFIED GROUP

460+

applications processed

96

AI assessments run

10

final shortlist

"100% transparent and data-driven" — the hiring team's words, not ours.

— SPEED IS THE STRATEGY

42%

of candidates accept the offer from whoever responds fastest

In India's active talent market, top engineers and BPO professionals are fielding multiple offers at once. A 4-week screening process doesn't just feel slow — it costs you the best candidates to a faster competitor.

— READY TO SCALE

Hire 25+ in India? **Do this.**

Replace manual phone screens with AI voice interviews at the first stage. Compress 4–6 weeks to under one week. Never lose a top candidate to a slower competitor again.
