

Your AI hiring tool is built for the **wrong law.**

APAC isn't GDPR. It's six different frameworks — and a tool built for the US or EU doesn't cover you in Colombo, KL, or Jakarta.

 THE GAP

There is no APAC GDPR.

Europe has one rulebook. APAC has a separate data protection law in every market you hire in — each with its own consent rules, retention limits, and cross-border transfer terms. A tool certified for the US or EU does not automatically meet any of them.

6

frameworks, one hiring process.

Singapore	PDPA — breach notice in 3 days
Malaysia	PDPA 2010 — consent before processing
India	DPDP Act 2023 — rules still landing
Indonesia	UU PDP — explicit consent for sensitive data
Vietnam	Decree 13 — cross-border risk assessment
Sri Lanka	PDPA 2022 — covers automated screening

WHERE THE RISK SITS

Every interview is personal data.

A voice screen captures audio. Optional video captures more. Both are regulated under every framework on the last slide. Four questions you need answered before you deploy:

- Is consent obtained, and is it informed?
- Where is the data stored, and for how long?
- Can it be deleted on request, within local law?

THE ONE RED FLAG

Candidate data should **never train** their model.

Voice recordings, transcripts, video — none of it should be used to train a vendor's AI without explicit, informed consent. Ask the question directly. If a vendor can't give you a clear no, that is your answer. So is a black-box score they can't explain to a candidate or a regulator.

 THE PROOF

Board IT approval.

Built to pass a bank's security review.

PII never used for model training. Data encrypted at rest and in transit. GDPR-aligned, on AWS, with auditable shortlists — not black-box scores. One major financial institution cleared its Board IT review for enterprise-wide rollout. That bar is the baseline, not the exception.

Compliance by design, not by checkbox.

See how Talvin handles candidate data, security, and APAC localisation — before it shows you a sales deck.
