

2026 Playbook

Are You Measuring Recruitment Wrong?

KPI #1 — TIME-TO-SCREEN

**Screening 150 candidates
used to take 4–5 weeks.**

MANUAL

4–5

weeks

AI-ASSISTED

5

days

Your best candidates accept offers within 48–72 hrs. Speed is your competitive moat.

42%

**of candidates accept from
whoever responds first.**

Not the best offer. Not the strongest brand.

The fastest response. In APAC markets, slow pipelines don't just cost time — they cost your top hires to a competitor who moved in 24 hours.

KPI #2 — SCREENING QUALITY

You don't have a hiring problem. You have a screening problem.

- ⚠️ **70%+ of screening interviews** are conducted with candidates who will never progress. That's not a pipeline issue — it's wasted recruiter time at scale.
- ✓ Track your **screening-to-interview conversion rate**. If you're filtering out 60–70% at the next stage, your criteria or method needs a reset.

62%

**faster time-to-hire
with AI-assisted screening.**
